

All in on AI

reveal

Human-Centered AI Empowering
Legal Professionals

The most powerful Artificial Intelligence tools augment and amplify human cognition, melding mind and machine to drive better results. The latest release of Reveal's flagship platform does this and more.

The Reveal platform delivers the most comprehensive set of AI functionality in the legal industry. You can build efficient and scalable AI-powered workflows with seamlessly integrated data visualizations and AI modeling to make informed decisions faster. All with a world-class user experience that puts you at the center of every data decision.

Reveal is Changing How You Approach eDiscovery

Reveal gives you the most complete investigative and eDiscovery platform. You can transform the most challenging data sources into meaningful insights at lightning speed.

- Effectively manage any size matter from processing through production.
- Empower your litigation support and review teams with the AI capabilities they need to manage the modern eDiscovery.
- Streamline data culling and investigative workflows.
- Make one-click decisions on what data is important to your matter.
- Use patented concept search to quickly uncover hidden connections between terms and people.

Reveal's new simplified AI model building workflow helps you prioritize and categorize your data faster. Building a custom AI model is as simple as creating a tag. While subject matter experts are coding documents, Reveal is using active learning to train your AI model. Use predictive scores from your model to prioritize documents for analysis and review.

A Platform for Every Need

The Reveal platform puts the industry's leading AI at your fingertips and you at the center of the decision-making process.

Electronic Discovery

Interactive data visualizations like Reveal's Cluster Wheel allow you to rapidly explore your data to quickly identify pockets of relevant content. The Dashboard makes it easy to filter your data by time and custodian. Build custom AI models to help you prioritize documents for review and get to the most relevant content faster.

Investigations

Find out who knew what and when quickly with tools like interactive visualizations and Concept Search. For organizations that do lots of the same kind of investigations – such as harassment or discrimination – Reveal offers over 30 out-of-the-box pre-trained models that can be used to jumpstart your investigation.

Early Data Analysis

Use Reveal to make more informed data decisions earlier in your eDiscovery workflow. Quickly categorize, promote, or remove low value data with the industry's most advanced AI-powered features. Rapidly organize concepts and isolate junk.

Communication Compliance

With Reveal, empower your compliance team to quickly and efficiently analyze communication content for potential policy violations and legal risk. Combine our data analytics and lightning-fast search technology with our pre-built AI models from the AI Model Library to identify compliance issues while suppressing the communication noise.

Intelligence Mining

Use Reveal to analyze your organization's dataverse for actionable intelligence and valuable insights. Reveal's transparent Concept Search finds things that would rather stay hidden, seeing through code names and other obfuscations to get right to the high value data faster than any other data analytics platform on the planet.

Consolidate & Automate Every Step of the Process

Reveal's Recent Acquisition of LIGL

With the acquisition of Technically Creative and LIGL, the Reveal platform now has the most sophisticated workflow automation and digital evidence lifecycle capabilities available.

End-To-End Orchestration

Reveal brings together in one single streamlined system every hold and discovery task, workflow plan and quality check. With Reveal you get a higher level of control, more time for more important tasks, and overall lower costs. It allows you to easily perform and track quality checks, and to oversee the process and all its steps in order to address any problems before they cause costly delays.

In-Place Preservation

Reveal automates the preservation of data in-place by enforcing record retention policies with one simple click.

It has integrations to more than 40 types of enterprise and cloud data sources, and it ensures holding custodian data by confirming successful data preservation through real-time data integrity checks.

Complete Hold Workflow

Reveal helps you manage the entire hold process within one convenient and cost-effective platform.

It identifies custodians automatically through IT system integrations and it preserves at source by integrating with existing systems and data stores.

Automated Data Collection

Reveal automates ESI collections with built-in chain of custody, executes forensics remotely, making it possible to integrate and manage enterprise and cloud data, to enable legal teams to perform comprehensive collections in a defensible manner with the press of a button.

Automated Connectivity to Collaboration Platforms

Reveal's Recent Acquisition of Technically Creative

Reveal recently acquired Technically Creative, an elite technology services company specializing in automating and unifying governance for organizations worldwide. Reveal's investment in Technically Creative allows the immediate deployment of robust data connectors to expand governance and compliance workflows within Reveal – all of which will be fully-automated, cloud-native and scalable.

The new data connectors include a direct and secure connection between Reveal and commonly used platforms such as Office 365, Teams, Slack and more.

The automated data collection workflow enables customers to dramatically accelerate time to valuable insights. These data connectors can also help reduce the cost of preservation and collection, while helping to mitigate risk when data is on the move.

Robust Processing & Production Capability

Data Processing

Reveal's fast and powerful processing engine allows you to securely digitize more than 900 file types with our self-service uploader. Gain insights into your data, regardless of data size or complexity, faster than ever before.

Speed & Scalability

Regardless of the size and complexity of your data, Reveal enables you to rapidly transform your digital content into meaningful insights. You now know more in less time.

Reveal's processing engine is extremely flexible and can scale to keep pace with your organization's ever increasing data volumes.

Self-Service Uploader

Users can upload large and complex data sets via the web interface. Reveal will automatically process your data without human intervention. The processing results are then presented to you for further analysis and review.

Digitize Everything

Leave no file behind with efficient and scalable processing that turns more than 900 file formats into extractable content ready for analysis.

Flexible Workspaces

Reveal's flexible architecture allows you to seamlessly transfer processed data between workspaces where you can save and reuse processed data across multiple matters. The workspace reduces matter ramp up time and creates efficient project setup workflows.

Production

View data produced by other parties or create your own productions within the production module. Active monitoring scales resources to meet tight deadlines. Easily share productions within the tool with secure access or provide access to download the production directly.

Pre-Production Reporting

Access critical information like privileged documents, page counts and potential errors prior to running your production.

Color Recognition

Color reduction technology detects when color can safely be viewed as black and white to reduce file sizes and rendering delays.

Scalable Job Sizing

Jobs are actively monitored and auto-scaled to optimize time to completion.

Automated Distribution

Easily export productions, selecting precisely which data to include, changing field names if desired. Then, use time-limited dedicated links to share productions.

Interactive Visualizations for Rapid Exploration

Explore your data with precision and speed with Reveal's interactive and interconnected data visualizations.

Dashboard

Reduce the noise using Reveal's Dashboard. Filter out low value content by time, custodian, or file type, and quickly zoom in on potentially relevant data. Evaluate documents with higher predictive scores to find hidden connections between relevant content and other metadata.

Clusters

Rapidly explore large volumes of data at a zero state to find topics of interest. Easily find key clusters of documents and analyze their context to confirm relevance. Isolate and deprioritize low value clusters for document review.

Communications

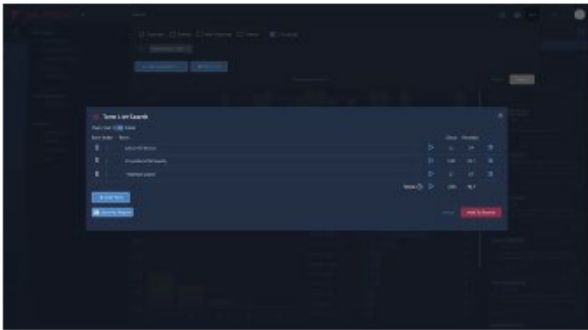

Quickly understand who was communicating about specific topics or subset of data, including their respective level of participation.

Heat Map

Reveal's new interactive Heat Map visual enables you to identify hidden connections between the values of two intersecting fields.

Dynamic Search at Lightning Speed

Create robust search queries that produce instant results with Reveal's dynamic search builder. Filter on any metadata field or combine the power of search and data visualizations to zero in on relevant content faster.

Dynamic Search Builder

Execute a Keyword Search and evaluate the precision of each term in real-time. Create simple or complex searches and metadata filters using Reveal's dynamic search builder.

Concept Search & Brain Explorer

With Reveal's patented Concept Search technology, search for a term, phrase, or even a paragraph. Analyze related concepts using the interactive Brain Explorer and uncover hidden connections between terms and people.

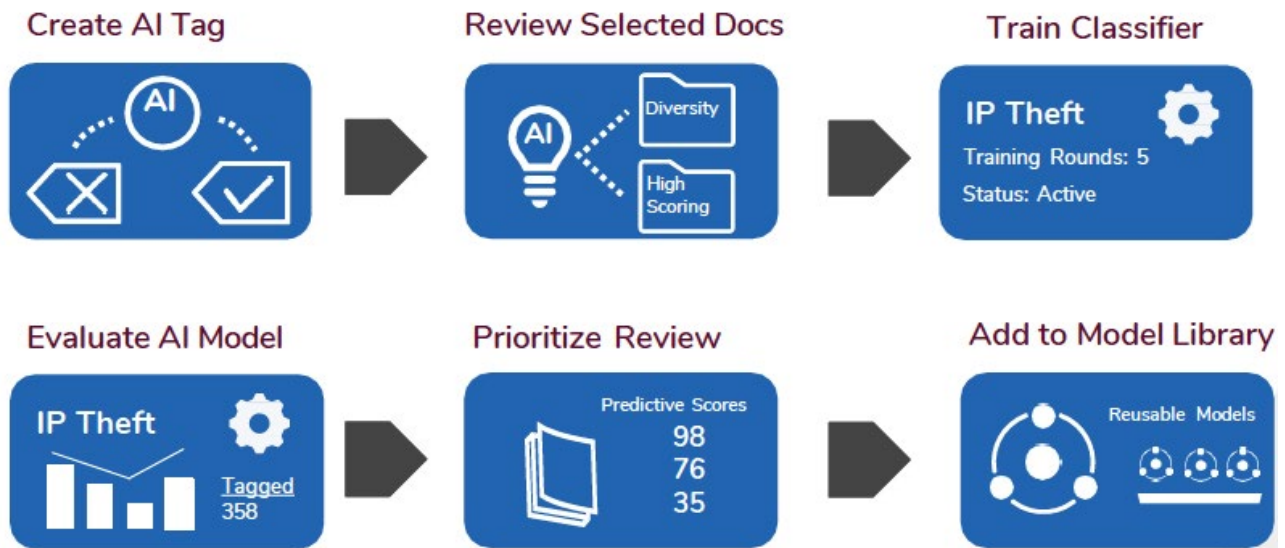

Simplified Supervised Learning Workflows

Creating a custom AI Model in Reveal is as easy as creating a tag. Build your custom models using AI Driven Batches that intelligently select documents to accelerate the training process. Evaluate the effectiveness of your model after each training round and use interactive simulations to decide how long to train.

Use 30+ pre-built AI Models from the only AI Model Library in the industry. Apply these models at any time to help jumpstart the identification of relevant content.

Use Reveal's accurate predictive scores to prioritize document review and to help you categorize documents based on specific human behavior or wrongdoing.

AI Model Building Workflow

Jumpstart Your Legal Matters with Pre-Built AI Models

No other technology provides you with 30+ pre-built AI models that allow you to jumpstart the AI Model training process. Curated by industry leading data scientists, these out-of-the-box models can help you quickly organize and prioritize your documents for attorney review.

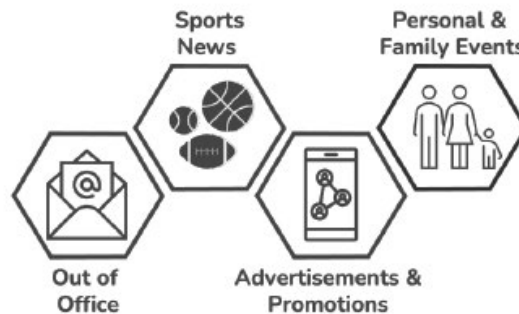

Apply a model from the library which considers what the model has already learned about a specific topic and applies that learning IP to the documents within your project. This will result in predictive scores being assigned to each document. You can use these scores to prioritize your documents for review, or you can use them to jumpstart the training process for a new model.

Quickly Assess Review Quality & Speed

Tagging Reports

Reveal provides you with several new tagging reports that can be used to measure the performance of reviewers and provide statistics related to the document tagging/coding function.

Accuracy Report

This report calculates the accuracy of the reviewers in applying tags. This is done by comparing tag work product to a specified example set and analyzing the document content of the examples against that of the documents tagged in the report scope.

Comparison Report

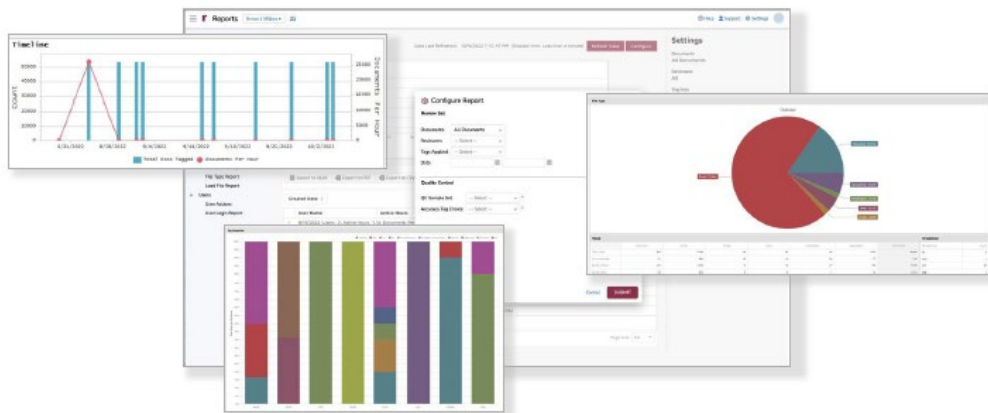

This bar chart provides a visual overview of the tags by Reviewer by Tag Set. Reviewer's selections may be quickly compared using the color-keyed bar chart; gliding the pointer over a Reviewer's bar provides detail numbers for each tag. Retrieved entries can be clicked to open the list of documents for the selected tag in the grid view.

Breakdown Report

This report provides a select overview of all of tags by Tag Set and Reviewer. Retrieved entries can be clicked to open the list of documents for the selected tag in the grid view.

Efficiency Report

This report provides a breakdown of the efficiency of the document reviewers. It shows the total number of tags set by the Reviewer, then breaks this out against Active Minutes in Reveal to report Average Tags per Hour and Average Tags per Day.

Reveal also offers reports that analyze custodian, document, and user related activities

The Preferred AI-Powered End-to-End Solution

Reveal is the single investigative and eDiscovery platform you've been waiting for. All the AI-Power you need to design efficient workflows, uncover valuable insights, and accelerate the identification of what matters.

As the dataverse continues to increase in size and complexity, you need a forward-thinking technology that can keep pace. Whether you work for a litigation support provider, corporation, law firm, or government agency, Reveal provides you with all the processing, analysis, and review tools you need to manage all your legal matters.

Learn more about how the industry's preferred AI-powered technology that was built to manage the dynamic landscape of electronic discovery.
